

## The albert carbon footprint form

The albert carbon calculator is a free online resource and the industry standard environmental impact assessment for TV productions.

Production companies are required to complete and submit a carbon footprint assessment form using the calculator for the majority of programmes commissioned by S4C (see exceptions below). This form must be submitted to the S4C business affairs team within two weeks of a programme's transmission and forms part of a production's final deliverables.

Please note, series under 15 minutes in total duration and/or under £50k in total budget are currently not required to submit an albert footprint form.

Completing assessments using the calculator requires the input of data such as a production's use of generators, flights and days in post-production. Producers are advised to familiarise themselves with the information required for the assessment early in the production process to speed up the completion of assessments.

The calculator can be found at <https://calc.wearealbert.org>.
